

FOR IMMEDIATE RELEASE · JOINT RELEASE: NATURALFORMS + COMPANYCAM

naturalForms and CompanyCam Integrate to Streamline Field Documentation

New integration auto-prefills project data into smart forms and syncs completed documents back — with eSignatures, sketches, and workflow automation helping contractors in construction, roofing, HVAC, restoration, and inspection work faster and more professionally.

DAYTON, Ohio — August 26, 2026 — naturalForms, the smart forms and eSignatures platform trusted by tens of thousands of field professionals for over 20 years, today announced a new integration with CompanyCam, the leading job site productivity platform for contractors.

The integration connects CompanyCam projects directly to naturalForms — project details auto-prefill into documents like inspection reports, proposals, change orders, and safety checklists, and completed documents sync back to the CompanyCam project automatically. This eliminates manual data entry, file transfers, and disjointed workflows, enabling teams to deliver professional documents with eSignatures and sketches in minutes instead of hours.

“Field teams shouldn’t have to choose between great photo documentation and great paperwork,” said Nick Garrett, Partnerships, naturalForms. “With this integration, project details from CompanyCam flow right into naturalForms documents, and completed reports sync back to the project — no file transfers, no extra steps. It’s how field tools should work together.”

“Our users already document every detail on the job site with CompanyCam. Now those job details can instantly power the reports, proposals, and change orders needed to close out jobs faster,” said Kevin Cairns, Senior Integrations Manager, CompanyCam. “This integration is a natural fit for contractors who expect their tools to work as hard as they do.”

How the naturalForms + CompanyCam Integration Works

- CompanyCam project details automatically pre-fill into naturalForms documents — no retyping job info, addresses, or customer details.
- Completed documents sync back to the CompanyCam project automatically, keeping everything connected from first photo to final signature.
- Teams produce professional documents built on their own form designs — with eSignatures, sketches, offline capture, and automated workflows — delivering finished reports from the field in minutes instead of hours.
- The integration supports inspection reports, proposals, change orders, safety checklists, and more — any document type that field teams need on the job site.

The naturalForms + CompanyCam integration is available now. To learn more or book a demo, visit naturalforms.com/companycam or companycam.com/integrations/naturalforms.

About naturalForms

naturalForms has been transforming how field teams capture and process information for over 20 years. Unlike generic form builders, naturalForms turns your own existing forms and PDFs into smart, fillable documents that match your exact design — no rebuilding. The platform adds eSignatures, sketches, offline capture, and workflow automation, and connects with the tools contractors already use — helping tens of thousands of professionals across construction, roofing, HVAC, restoration, and inspection industries eliminate paperwork and get more done in the field.
